

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

# REPORT.

---

OFFICE OF THE FACTORY INSPECTOR,

ALBANY, N. Y., *January 28, 1901.*

*To the Legislature:*

The Fifteenth Annual Report of the Factory Inspector of the State of New York is herewith presented for your consideration.

One year ago we called your attention to the increased interest manifested by the people of this State in the work of this Department. We are pleased to be able to say that the same amount of interest exists to-day, only in a more pronounced and intense form than ever heretofore. The importance of this branch of our State government is fully appreciated and understood. The added interest in our work is due mainly to the many new features of the Labor Law which are now being enforced by this Department. A brief reference will be made, in this introductory, to the most interesting features and clauses of our Labor Law.

It is pleasing to note the great friendliness with which our labors are viewed by the leading manufacturers of the State, as well as by the leaders among laboring men. Criticism comes only from an imperfect knowledge of our laws, and from a lack of appreciation of the rights and privileges of each and every citizen regardless of his standing or occupation. A correct and impartial administration of the affairs of this Department requires

that all shall be treated with absolute fairness and that special privileges shall be extended to none. This course has been closely adhered to and is responsible for the confidence placed in the Department and in its work. The interests of the wage workers have been jealously guarded without in any way trampling upon the rights of the employer.

The wisdom of legislative enactments, designated as labor laws, can best be judged by the results obtained through the enforcement of the same. We invite your attention to the following report, confidently believing that its contents will be ample justification of all laws referred to this Department for application and enforcement.

\* \* \* \* \*

Your attention is called to the following summary of work performed by our deputy inspectors during the year. Last year the total figures for similar work were 48,800. This year our totals reach the large sum of 80,392, an increase in record work of over 65 per cent. We take special pride in the good showing made by our Department. In addition to the above sum total, our inspectors gave their personal attention to 4,340 miscellaneous matters of which no official record has been filed and consequently no credit is taken therefor in this report.

Total number of manufactories inspected.....	24,392
Total number of applications for licenses investigated...	28,056
Total number of licensed tenements and dwellings in- spected .....	6,039
Total number of applications for licenses reinvestigated..	7,438
Total number of bakeshops inspected.....	4,126
Total number of mines inspected.....	125
Total number of manufactories, bakeshops and mines in- spected twice or oftener during the year.....	2,558

**FACTORY INSPECTOR.****11**

Total number of complaints, compliances and other matters investigated during the year.....	3,953
Total number of places visited and found closed, suspended, removed, burned, etc., on inspection.....	3,705
Grand total.....	80,392
Separate manufactories against which orders were issued	16,650
Separate manufactories against which no orders were issued .....	7,742
Separate manufactories in which compliances have been obtained .....	15,080
Separate bakeshops against which orders were issued...	3,075
Separate bakeshops against which no orders were issued.	1,051
Separate bakeshops in which compliances have been obtained .....	2,651
Separate mining companies against which orders were issued .....	25
Separate mining companies against which no orders were issued .....	57
Separate mining companies who have complied with orders .....	19
Separate mines which have suspended during the year..	9
Total number of accidents (all kinds).....	2,373
Total number of fatal accidents in manufactories.....	43
Total number of accidents in mines.....	8
Total number of fatal accidents in mines.....	5
Total number of prosecutions instituted.....	223
Total number of convictions.....	165
Total number of cases pending.....	13
Total number of cases withdrawn.....	6
Total number of cases held for grand jury.....	1
Total number of acquittals or discharges.....	38
Amount of fines collected.....	\$2,503

	Total number of persons employed.	Males.	Males under 18 years.	Males under 16 years.	Females.	Females under 16 years.	Males and females under 16 years.	Illiterate children.	Children under 14 years.	Children found without certificates.
<b>FACTORIES.</b>

Total number of illiterate children employed in all bakeries inspected.....							178			0

[illegible]

**FIFTEENTH ANNUAL REPORT OF THE  
LAWS.**

It is not the intention to occupy time or space with a detailed treatise on each existing Labor Law. The subject has been thoroughly covered in former reports. We shall, under the proper heading, recommend amendments to certain sections and will at the same time advance our reasons for advocating the suggested changes.

**THE "EIGHT-HOUR" LAW.**

The provisions of section 3, article I of the Labor Law, restricting the hours of labor on all public work to eight per day, are very generally observed.

However, many complaints were received charging violations of the provisions of the law requiring the payment of the prevailing rate of wages to all workmen employed on public work. Reference was made to this subject in our last annual report and attention was called to the difficulties to be overcome in the effort to determine the question of the "prevailing" rate of wages. Inasmuch as the "prevailing" rate is entirely a question of fact, the most expeditious method possible was adopted for the purpose of securing the necessary information whereby the "prevailing" rate could be determined for the various trades and callings in which laborers, workmen and mechanics are employed. The responses received to our requests for information on this point were representative of the interest taken in the question by contractors and employing firms generally. During the year the Department sent out 3,528 circulars to persons or firms engaged in the several branches of contracting and from whom we could reasonably expect to receive some reliable information as to workmen employed, hours required of workmen, and rates of wages paid. The Department also issued 296 circulars addressed

to representative bodies of workingmen on the same subject. The returns from these sources were generally prompt, and, we believe, reliable and valid.

We feel that contractors engaged on public contract work should not be made the victims of caprice or malice; and, that, before any conclusions are arrived at by this Department, the fullest investigation possible should be prosecuted, to the end that no injustice might be done such contractors. It would be entirely improper for the power of the State to be used to jeopardize their wealth and property except upon indisputable evidence of a violation of the law in this respect. The rate of wages agreed upon and demanded by a labor organization does not necessarily constitute the "prevailing" rate. An amount of wages paid can only become the "prevailing" rate when such rate of wages is paid to a clear majority of all the men engaged at that particular trade or calling, in any given locality. Several complaints made to this Department were based upon the assumption that the union rate of wages was the "legal" rate. This cannot be so, unless under conditions and circumstances as indicated above.

#### ALIEN LABOR ON PUBLIC CONTRACTS.

The employment of alien labor on public contract work is a subject in which every citizen of our State should take deep interest. We believe it is right and proper that citizen labor should be given the preference on all forms of labor paid for with public funds. Section 13 of article I of the Labor Law gives force and effect to this belief. Said section provides for the exclusion of all aliens from any connection whatever with, or employment upon, public works, reserving the right and privilege to labor thereon to American citizens only. The greater number of our immigrant

alien population belongs to the class sometimes called “unskilled laborers.” Therefore, they enter into competition with the most helpless of all grades of citizen labor. Hence, the propriety of legislative enactment to prevent the unnecessary lowering or degrading of such American labor. The enactment of this section, however, seems somewhat paradoxical, in view of the fact that the United States government holds an open door to the healthy, able-bodied paupers of entire Europe.

Various complaints of violation of this section of the law were received from different localities during the year. Each such complaint was carefully investigated and proper steps taken to insure compliance with the statute forthwith. Our efforts were successful in every instance. Many aliens were immediately discharged from their employment, some immediately declared their intentions of becoming citizens, while a few, who were entitled to the same, procured their naturalization papers.

TABLE

*Of Eight-hour Matters and Complaints of Violations of Sections 3 and 13 of the Labor Law, Relating to Hours, Wages and the Employment of Aliens on Public Works.*

**CHILD LABOR.**

The law regulating the employment of children in manufacturing establishments, etc., has been on our statute books for many years. Generally speaking, it is observed very closely and very thoroughly. Its value and propriety is appreciated. We must again, however, call attention to the fact that the boards of health and departments of education in various localities of the State are somewhat lax in their method of carrying out the provisions of this law. Many health officers fail to clearly and intelligently comprehend their own duties under the statute. Its provisions are clear and specific and it requires no unusual degree of intelligence to carry the mandates of the law into effect. Greater care in the granting of certificates to children applying therefor would materially reduce the number of such certificates

unlawfully issued and would correspondingly lighten the duties of the Factory Inspector.

The Department regards the enforcement of the law against the employment of young children as one of its most important duties and every effort is made to see that its provisions in this respect are strictly obeyed.

During the year our officers found 16,419 children under 16 years of age employed in factories, etc., throughout the State. Of this number, 1,898 of the children were employed in places where the clothing trade was carried on and 178 were found employed in bakeshops and confectioneries. Children to the number of 3,016 were discharged from employment by our inspectors because they had failed to first file with their employers the certificate called for by law. The Department has been notified of the granting of 20,383 certificates to children by health boards throughout the State, in accordance with the provisions of section 70 of the Labor Law.

Legal proceedings were instituted against fourteen employers for violation of the law requiring that certificates be filed for children between 14 and 16 years of age. Convictions were secured and fines imposed in nine of these cases.

### OVERTIME.

The hours of labor for minors under 18 years of age, and all women, employed in mills, etc., are restricted by the Factory Law of this State to a total of sixty hours per week, or ten hours per day, except where the purpose is to make a shorter workday on the last day of the week.

The Department is constantly receiving communications from manufacturers, requesting that permission be granted them to

work female and minor help overtime in order to make up for lost hours, to make extra money, etc., especially as the help are anxious and willing to do the work. To all such requests the Department has no alternative but to insist that the requirements of the law shall be strictly conformed to and carefully observed. The language of the law is emphatic and it is not within the power of this Department to grant the permission sought by these business people.

These requests are principally from printing establishments, knit goods factories, candy factories and manufacturers of ladies' underwear, etc.

The confectionery trade is especially hard pressed during the months of October, November and December, in order to meet demands for the holiday trade. Candies deteriorate with age and must necessarily be fresh to be satisfactory. Therefore, it is readily seen that manufacturers cannot possibly make stock ahead during the summer season and, as a consequence, a heavy portion of their work must be done during a few weeks. It is the opinion of this Department that section 77 of article VI of the Labor Law could profitably be amended so as to permit such industries to get over the emergency without loss to business. The proprietors of vegetable and fruit canning factories, and the like, often find themselves seriously hampered because of the fact that their female and minor help cannot put in a sufficient number of hours of labor to dispose of quantities of fruit, etc., which perhaps is not in a stage where it can be safely kept until the following day without injury. All of these occupations could be given the benefit of a special provision in our laws whereby the business operations of the concerns would be permitted to lawfully meet the exigencies of their trades at certain seasons,

and at the same time the statute could be so framed as to prevent any abuse in the matter of overtime requirements being committed against employees.

### DANGEROUS MACHINERY.

The record of fatal and serious accidents occurring as a result of unguarded or imperfectly guarded machinery, has demonstrated to this Department the propriety of insisting that manufacturers shall protect all unguarded machinery, belting, shafting, set screws, etc., even though the chances for accident thereon may appear remote and unlikely. One phase of the work of this Department is the labor of doing all possible in the direction of securing the lessening of accidents to employes and no effort is spared to give wage-earners the benefit of the safeguards and protection contemplated by and provided for in the laws referred to this Department for application and enforcement. We are pleased to say that it is our experience that with the majority of employers it is only necessary to suggest the advisability and wisdom of certain improvements in order to have the matters properly attended to; and, in this way, without the compulsion of legal action, many safeguards have been provided and needed reforms in the conditions under which machinery was operated, have been accomplished.

During the year forty-three fatal accidents occurred in factories, etc. Twenty-three of these fatalities occurred on machines of various kinds.

### ACCIDENTS.

In our last annual report reference was made to the increase in the number of accidents reported to this Department. This year we are setting forth facts and figures which indicate a

greater increase along this line than was apparent during the previous report year. The increase does not necessarily mean that more accidents have actually occurred; but such increase indicates rather a growing tendency to carefully and conscientiously report every casualty, whether of a slight or serious nature. This is but right inasmuch as the employer is not in a position to know definitely, at the time of the accident, whether or not the result will be serious. If the accident is slight, and the injured employe, through his own carelessness and neglect of the ordinary means and methods of remedy, suffers thereafter, the report of the accident, submitted to and placed on file in this office, will afford to the employer the protection which he may eventually need.

The careful enforcement of section 87 of the law, requiring that all accidents shall be reported within forty-eight hours after the occurrence thereof, is equally effective in preserving the rights and interests of employes who are required to labor under hazardous conditions. However, as a rule manufacturers or employers are particularly careful to make conditions in and about their factories and their machinery, etc., as safe as possible because they realize that it is much cheaper to take every precaution than to submit to the expense and worryment of damage suits.

The following table sets forth definite information relative to accidents reported to this Department during the past year:

TABLE OF ACCIDENTS.

## POLISHING AND BUFFING.

In the matter of the strict enforcement of the provisions of sections 81 and 91\* of the Labor Law, the Department has made substantial progress during the year. The law is mandatory and the factory inspectors have no course other than to require strict and full compliance with its provisions. The protests and objections against compliance with orders to install exhaust fan systems are numerous and strong. The courts have sustained the law on several occasions, and it is gratifying to be able to report that this year the Department has secured convictions under these sections of the statute.

During the year 196 separate orders were issued requiring exhaust fans to be installed, machinery to be connected with exhaust fans, etc. A full compliance with the law was brought about in each case. It is especially pleasing to be able to state that some long-standing orders, calling for fans to remove dust, etc., from dust creating machinery, which orders have been on the Department records for several years past, were disposed of and the law fully complied with in the establishments to which our orders applied.

The law restricting the employment of male minors under the age of 18 years and *all* women upon certain kinds of polishing and buffing wheels is very generally observed. As evidence of this we refer to the fact that not a single complaint touching upon this subject was filed with the Department during the year. However, the bureau, through one of its deputies, took issue with a large manufacturing concern for what we deemed was a violation of the provisions of section 91\* of the law. A boy under 16 years of age was employed on an emery polishing belt. The firm's representative responsible for his employment

thereon was arrested by our officer upon a charge of violating section 91\* of the law. At the trial of the case the defense admitted the facts to be as charged in the complaint; but contended that inasmuch as the prohibitive clause of the statute did not specifically mention the kind of a polishing machine on which we had found the boy employed, the defendant could not be held, inasmuch as the law must necessarily be strictly and literally construed. The court took this view of the case and dismissed our complaint.

In view of the foregoing it would appear that if section 91\* of the law is to become effective it should be wholly reconstructed.

### BOILER INSPECTION.

The laws enacted requiring the inspection of stationary steam boilers and their appurtenances have been carefully enforced by this Department, with the result that there has been filed with the bureau during the past year 9,500 or more duplicate reports or certificates covering examinations and inspections of boilers.

The Department has nothing specially new to report in connection with this portion of its work but can consistently repeat its suggestion of last year, that legislation be enacted to render this section of the law more effective and place the Department in a position to more thoroughly and more closely oversee and control the work performed under this provision of the statute.

The arguments advanced to show cause why factories should be inspected, machinery guarded, buildings made safe, etc., are equally potent in furnishing reasons why boilers in factories should be inspected and maintained in a safe condition at all times. The object of all is to save life and protect property and to make the surroundings of the workingman such that he may

be able to earn his living in workshop or factory with the minimum risk of bodily injury or impairment of health.

So far our law has worked well and without friction and we have been notified of many old and risky boilers being replaced with new and thoroughly reliable ones.

But the law should provide for inspection by State inspectors, as the Department would then be in a position to know that all boilers affected by the law were carefully examined and properly inspected by competent and reliable inspectors.

In addition to the foregoing, we believe that persons having charge of steam plants should be required to submit to a test or examination as to their competency before being permitted to operate such steam plants. A law similar to the one now in force in Massachusetts, for the examination of steam engineers, would prove of great value and would provide sufficient revenue to pay all expenses connected with the enforcement of such a provision. And such a law would, in addition, insure to the owners of boilers and their employes better service and better protection.

### FIRE ESCAPES.

The interesting subject of fire escapes on factory buildings was treated at some length in the last annual report of this Department. But the harrowing tales of suffering and death by fire which reach us from time to time serve to intensify our feelings and to more firmly convince us that to provide ready and adequate means of egress in case of fire, from every shop and factory building in this State, is the bounden duty of the owners of all such property.

It would seem that the law should be so framed as to positively restrict the height of all factory and shop buildings to four or

five stories, except in cases where the building is of fireproof or slow-combustion construction. The law should also provide for the erection of stairways, in independent towers, the stairways to be of sufficient capacity to afford ample and easy means of exit within a given space of time to all workpeople who may properly and legally be given employment in such building.

The Department has diligently enforced the provisions of the existing law relative to matters regarding fire escapes, proper and ready means of egress from factories, etc., and every possible precaution is taken to have the fire escapes erected at locations best calculated to make their use probable and effective in case of panic or fire.

During the year the Department issued 138 orders, calling for the erection of new fire escapes, repairs to fire escapes, etc., all of which orders were fully complied with.

As a rule our orders calling for the erection of fire escapes—compliance with which orders means a matter of anywhere from \$200 to \$500 or \$600 expense—cause much discussion and argument on the part of persons responsible for compliance with the demands of the statute. And, in this connection, as in all other matters appertaining to the enforcement of the provisions of our laws, experience, tact and judgment are essential requisites in aiding an inspector to obtain compliance with orders without undue friction or recourse to the courts. It has been our policy to prosecute *only* when all other means of securing compliance with the law have failed, and in carrying out this purpose our inspectors deserve due credit for the amount of service they have performed and which is not such that it can be in any way tabulated or made to appear in our records.

## SCAFFOLDING.

The safety of persons employed in the construction and repair of all structures requiring the use of scaffolds and mechanical contrivances is a most important duty in connection with the work of this Department. However, owing to the very large amount of work required, and the great variety of the different duties imposed upon us, we have been to a certain extent unable to give this matter the particular and close attention which it deserves. Comparatively speaking, the number of complaints relative to unsafe scaffolds, etc., have been very small. This is probably due to the apparent lack of interest on the part of the men employed upon, or in connection with, these appliances. The indifference of the majority of these employes to the perils and dangers surrounding them in their work is remarkable. The reckless assumption of risks by them simply serves to practically nullify the benefits conferred by this law.

In one instance an inspector in the Department found a scaffolding in use fully 24 hours after he had condemned it, not even a pretence having been made to strengthen it or to improve its condition. The painter using the scaffold was found to have a boy at work thereon with him, and in order to circumvent the law if possible, claimed, when he was brought before the court for violation of the statute, that the youth was his partner in business and therefore the Department could take no action against him in the premises. This was certainly a unique claim whereby to make an effort to escape just punishment for the offense. However, the excuse for violation of the law was too transparent and the presiding judge convicted the defendant and imposed a penalty of \$30 for the transgression.

The task of watching scaffoldings used by painters, etc., in their business is a gigantic one in itself, for the reason that these scaffoldings are in use in one place to-day and in another place to-morrow. They are here to-day and there to-morrow, springing up like mushrooms over night. One of our inspectors condemned fourteen scaffoldings in two weeks, all being ramshackle and unsafe affairs.

The zeal of many of our deputy inspectors in the matter of enforcing this provision of the law is most commendable. The officers have almost invariably taken the initiative, with the best of results. During the year the Department brought two cases of violation of the Scaffolding Law into court. In the case referred to in the first part of this article, conviction was secured and fine imposed; in the second case, the Department failed to convict, inasmuch as we were unable to locate witnesses. In 31 different cases violations of this provision of the law were brought to the attention of the Department by our inspectors, and in each instance a compliance with the law was insisted upon and secured.

### COMPLAINTS.

The total number of complaints received by the Department during the past year is 1,762. These complaints are exclusive of those received relative to violations of the eight-hour law, etc., on public work. The increase of more than 100 per cent over our complaint figures for 1899 does not, in our judgment, indicate that more violations of law occurred; but, rather, the increase is indicative of the fact that workingmen and workingwomen, and the public generally, are becoming more familiar, and better acquainted, with the provisions and requirements of the statutes referred to this Department for enforcement and they are determined to aid the bureau, so far as may lie in their power, in its

earnest efforts to stamp out existing evils and punish violations of the law. The enactment of our present very effective laws regulating manufacturing in tenement and dwelling houses is without a doubt responsible for the major part of the large increase in the number of complaints filed with us.

Last year, or during 1899, 46 per cent of all complaints were found to be sustained on investigation by our officers. This year we report that fully 70 per cent were wholly or partially sustained on investigation, and we regard this result as very satisfactory. The record tends to show that the persons furnishing information to this Department are very generally confining themselves to a true statement of facts. We many times find that complaints are lodged from motives of spite and revenge and that the information submitted is not truthful or furnished in good faith. Conditions which many times are borne without a murmur during employment, are made the basis of serious charges and complaints immediately an employe is discharged from employment. These circumstances, however, cannot relieve us from the performance of our duties. In all cases where charges contained in complaints are found to be established on investigation, an immediate abatement of unlawful conditions is insisted upon.

The following table will give a general idea of the nature of the complaints submitted and their validity or groundlessness, as determined upon careful investigation by officers of this Department:

Table of Complaints.

	Complaints sustained.	Complaints partly sus- tained.	Complaints groundless.	Total num- ber of com- plaints filed.

TENEMENT HOUSE MANUFACTURE.

In the last annual report of this Department lengthy reference is made to the "sweat shop" problem. It is not our intention at this time to re-cover the ground then traversed but simply to refer briefly to the labors performed during the year under the provisions of article VII of the Labor Law.

The amended law, regulating the manufacture of certain arti-  
cles in tenement and dwelling houses, and in buildings in the

rear thereof, has been in effect for fifteen months. Therefore, the public is naturally interested to know something regarding its operation.

The utilization of tenement labor in some branches of manufacture is very extensive, especially in Greater New York. This is undoubtedly due to the cheapness of this form of labor. The willingness, yea, eagerness, of the class that thus labors, to accept the starvation prices offered, is easily traceable to their habits of living and the necessity which compels them to struggle for existence and subsistence. It is nevertheless a sad commentary upon the spirit of the age, that at the dawn of the twentieth century men who hold their heads high in the business world, and, presumably, some also in the religious world, indirectly traffic in the very life-blood of their fellow-men.

While it is not our function to inquire into the subject of compensation received by the tenement worker, the information is sometimes volunteered. The grinding operation of our competitive system is entirely legitimate from the technical, literal standpoint of law, and no amount of suffering or misery traceable to, or caused by such operations can be used against he who so operates; yet, we believe that a moral and higher law, which demands justice between man and man is violated every day by those who trample upon every humane sentiment and disregard the laws of health and morality in their greed for gain. It will be understood of course that the foregoing does not apply to all manufacturers who employ tenement workers. While the question of wages paid to these workers is a subject over which this Department has no power or control, still we are most forcibly impressed from day to day with the fact that while the present grinding and competitive policy in the "sweating" system con-

tinues in force, and is taken advantage of by manufacturers, who should pride themselves on the good, lawful and sanitary conditions under which their material is prepared for market—prices and wages must continue to fall and the workday be lengthened until the very limit of human strength and endurance is reached.

Under the present statutes we are empowered to protect the public from goods manufactured under conditions liable to transmit or propagate germs of filth and disease. Our law now prohibits the manufacture of certain specified articles in other than licensed premises and while this provision of the statute has had a widely wholesome effect in mitigating the worst evils and dangers incident to tenement-house manufacture, still the field is so vast and so difficult of inspection that more facilities are plainly needed to enable the Department to maintain an almost constant espionage over the most thickly settled and populous sections of the cities wherein this class of work is carried on.

Every effort is exerted by officers of the Department to bring about the best possible conditions in workrooms and apartments affected by the provisions of section 100 of the law. We have endeavored to create in manufacturers or employers an increased sense of their responsibility under the law and we have labored with the workers to make them realize the necessity of performing their labors under improved and more cleanly conditions. All of this, together with the agitation by press and public, has had its effect and we cannot but feel satisfied that the work of the Department has been instrumental, to a large degree, in bettering and in many instances entirely abolishing, this degrading form of labor, the conditions surrounding which so stir the sympathies of all those interested in the amelioration of the

trials under which the majority of tenement-house manufacturing is carried on.

However, under the tenement-house system of manufacture, our beneficent laws restricting the hours of labor for all women and minors and prohibiting the employment of children, are set at naught. The inducement to long hours of toil and the utilization of child labor in order to swell the pittance received from unscrupulous manufacturers or contractors, is undoubtedly one of its most baneful evils. This condition can never be successfully or wholly regulated in the home as it can be in the shop or factory.

Tenement-house manufacture is also an unmixed evil from a sanitary standpoint. The dangers of contamination and of the wholesale spread of disease as a result thereof, is one of the greatest dangers attendant thereon. This death-dealing and misery-spreading system is injurious and wrong and no labor is too arduous or task too difficult which has for its purpose the curtailment, and, eventually, the almost entire obliteration of this obnoxious method of production.

During the year the Department has been unremitting in its efforts to place the application and enforcement of the tenement-house provisions of the law on a practical, sensible and efficient basis. The consequent labor entailed was very great and it is an utter impossibility to set forth in any report all the detail necessary in connection with this portion of our work.

The close of the present report year sees a vastly improved condition in thousands of tenement and dwelling workshops. Every part of this law has been tested and found effective. There is but one drawback of consequence noted at this time and that is the difficulty of obtaining correct and reliable information from

many of those employed in tenements under a license and the almost impossibility of getting the proper name and address of their employers, for the workers are constantly changing bosses in the hope of receiving a better wage or employment more favorable in other ways. The real, and many times assumed, ignorance of our language among license holders and applicants for licenses, renders it most difficult to get at true and reliable information regarding the workrooms, the contractors furnishing material, etc. The inability of the tenement workers to furnish intelligent information oftentimes makes it necessary for our inspectors to depend entirely upon observation. Also, the inspector is many times obliged to travel blocks and blocks with a worker in order to locate the contractor from whom goods were obtained. Another great difficulty lies in the migratory or nomadic tendencies of the people engaged in tenement-house manufacture. They are here to-day and away to-morrow. They take their licenses along; consequently it is a mighty hard task to keep track of them.

Section 100 of article VII of the law should be amended by adding thereto a provision requiring the owners of articles manufactured in tenements, in whole or in part, to attach to each such article, before it is placed in the tenement apartment, the correct name and address of said owner or his agent, the name and address to be plainly written in English and to remain thereon, for purposes of identification, until such time as the article is returned to the owner.

Owing to the fact that there is no comparison to be made between the conditions existing in connection with this method of production in Greater New York and other sections of the State, the report will treat them separately.

## GREATER NEW YORK.

The boroughs comprising Greater New York constitute by far the largest garment manufacturing centre in the country, if not in the world. The large foreign population, the overcrowding, and the division of work whereby it becomes so easy to enter this labor market, has naturally and easily brought about the "sweating" system or tenement-house method of manufacture. The sweating evil is so strongly entrenched in this territory that years of labor are necessary in order to bring the rooms and apartments used for the manufacture of clothing up to the standard contemplated by law. It must be borne in mind that to remedy or eradicate all the worst evils established as the result of this system is a herculean task, and while the factory laws, as at present constituted, cannot wholly abolish the deplorable results of this pernicious institution and its vicious effects, still we can do, and have done much in the direction of applying the law and enforcing the rules and regulations which provide for the observance of the ordinary laws of health and decency.

From December 1, 1899, to November 30, 1900, the Department carefully investigated 22,601 applications for licenses received from the territory of Greater New York. Our investigations established the right of 16,519 applicants to manufacture in their apartments, workrooms, etc., and licenses were accordingly granted to them, as required by law, while 6,082 were denied the privilege owing to unlawful conditions existing in or about their premises. During the same period 2,354 licenses were revoked; still, we have remaining and in full force at the close of the report year 16,059 licenses. The apparent discrepancy is accounted for by adding to the number of licenses granted this year the 1,894 licenses granted between September 1, 1899, and

November 30, 1899, the first three months during which the law was in effect.

The figures herein given but imperfectly represent the labor performed in connection with the enforcement of these provisions of law in the territory referred to. The field and office forces are deserving of great credit and commendation for the earnest and conscientious service rendered. Some members of our field force visited many of these premises repeatedly, insisting upon improvement in conditions or a cessation of business operations. The difficulties which surround the inspectors in the discharge of their duties are not, and cannot be, fully understood and appreciated by the uninitiated. The abuse which is heaped upon them must be borne patiently, the efforts to play upon their sympathies must be firmly met and set aside and without undue harshness; the threat of the man with a "pull" to "break" them must be disregarded; in a word, their lot is not the sinecure some seem to feel and believe. One of the most unpleasant features of the work of enforcing this law is the tagging of goods being unlawfully manufactured in a tenement or dwelling. Considerable opposition is experienced by the inspector, in fact we frequently find it necessary to send two officers together in order to successfully perform this duty. Goods were tagged in about 1,100 instances during the year in Greater New York. The value of this provision of the statute, especially in the metropolis, cannot be overestimated. It forces the owner of the goods so treated to come to the Department in order to get his material released; when the request for the release of his goods is signed by him, he thereby acknowledges his culpability, and we have very little difficulty thereafter in establishing a case against all such parties. This proceeding also proves an effective means of impressing the majesty of the law upon the minds of the tene-

ment workers. Their anxiety to satisfy the inspector that they are not working when he visits the unlicensed premises is very amusing. Their professions, however, are not always reliable. The inspectors have on several occasions taken clothing, in process of manufacture, from between the folds of unkempt and unclean bedding and affixed thereto that most feared of all emblems, the "tenement made" tag.

Our office force also deserves to have its special labors mentioned. Every application for a license investigated has to be closely and carefully examined in the office and the question of granting or not granting a license determined upon. When a license is refused two communications must be written conveying such information to the applicant and to the employer.

If an employer is caught giving work to the same party after receiving notice of refusal of license, no leniency whatever is shown and the notice sent him is made a part of the evidence submitted against him to the court. During the year 6,082 notices of refusal were sent to applicants for licenses and 5,092 notices were sent to the employers of these applicants. The discrepancy in these figures is accounted for by the fact that many applicants who do custom work are not employed by any person, doing the work for themselves; therefore, no employers' notice was required in their case.

Within the same period we sent out to manufacturers of clothing a demand for lists of outside workers or finishers. Some 3,300 such notices were mailed from our sub-office. Responses were received from 1,771, and 1,457 lists of workers were submitted, while 314 firms informed us that they employed no outside help. The lists thus gathered are of little value and this is due to the fact that the tenement worker, generally speaking, has no fixed abode for any length of time, and is continually changing em-

ployers. To be of any real practical value these lists would have to be gathered monthly. If this should be done the work of caring for and properly arranging the same would require the services of our entire clerical force to the exclusion of all other work. After a careful and thorough trial it is concluded that the gathering of lists is by no means essential to the success of our labors in the effort to regulate the sweating evil. We are convinced that equally good, if not better, results can be obtained by vigorously applying the penal provisions of the law to all violators, than by hampering and pestering busy manufacturers with technical demands and requirements. A new method of gathering the information sought in the lists or registers will be adopted during the new report year.

During the year 1900 a total of 16,519 licenses were granted in Greater New York, as stated before. It is interesting to know that in this number of licensed places we found 39,598 persons employed. The following classification as to kind of manufacturing carried on and the number of males and females employed at each branch of work noted, is both interesting and worthy of note:

*Enumeration of Employes where licenses were in force on November 30, 1900.*

## TERRITORY OUTSIDE OF GREATER NEW YORK.

In the cities of Buffalo, Rochester, Syracuse, Utica, Troy and Albany, and in the various villages and hamlets of the State the provisions of the tenement house law have been very generally observed and complied with. During the year 5,455 applications for licenses were carefully investigated, on 5,401 of which licenses were granted and on 54 of which licenses were refused. The remarkably low number of refusals speaks highly for the homeworkers of our State, outside of the metropolis.

The branches of manufacturing generally conducted in the homes in the territory here referred to are ready-made and custom clothing, dressmaking, and cigars. The Department very seldom finds it necessary to institute proceedings to punish for violations of the law, for the simple reason that we rarely have occasion to adopt such measures. We did, however, take legal action against three parties in the city of Buffalo for violation of the license law. These are the only cases, outside of Greater New York, where we had recourse to the courts for adjudication of like difficulties. We observe that as a rule manufacturers are very particular in their instructions to their help and if possible prevent any infraction of the law or the rules of this Department and their attitude on this matter is of very great help and assistance to the officers of the bureau.

Prior to December 1, 1899, we had granted to residents in this territory some 3,048 licenses. By adding this number to the total granted this year, we find there is in force at the present time, outside of Greater New York, 8,449 licenses. This means that each of the premises so licensed are now subject to inspection and supervision by this Department. Our inspection of these places has resulted in much good and to a certain degree has

generated the maintenance therein of conditions helpful and beneficial to the health of the workers and the public generally. It is safe to assume that after a few years of conscientious effort in the enforcement of this law, the dangers and unpleasant features surrounding tenement manufacture will almost entirely disappear.

\* \* \* \* \*

Separate reference has been made to the work performed in the territory of Greater New York and to the work performed in other sections of the State. We now desire to present a brief summary of the sum total of applications investigated, licenses granted, etc., in all sections of the State.

#### SUMMARY OF WORK UNDER SECTION 100 OF LABOR LAW.

Total number of applications investigated in Greater New York during 1900.....		22,601
Total number of applications investigated outside of Greater New York during 1900.....		5,455
Total .....		<u>28,056</u>
Total number of licenses granted in Greater New York during 1900.....		16,519
Total number of licenses granted in Greater New York during 1899.....		1,894

### INSPECTION OF UNLICENSED PREMISES.

To carry into effect and thoroughly apply the law relating to manufacture in tenements, requires something more than a mere inspection of the premises occupied by an applicant for a license. We must search for, and ferret out, the tenement worker. If this is not done then the one who conforms to the law is at a disadvantage, whereas the opposite should be the condition of affairs. Therefore, we have laid plans for a systematic inspection of tenements in the sections of our cities where manufacturing is mostly done, in order to bring all within the pale of the law and so that the lawbreaker may have no advantage over those who obey its mandates. During the year 4,574 such inspections were made and the law rigidly enforced where any infractions of its provisions were apparent. Question has been raised as to our authority to enter a private apartment or dwelling for the purpose of inspecting or investigating, in order to determine the existence or non-existence of unlawful conditions. To invade the privacy of the home, even of our humblest citizen, is a matter of grave import, and nothing less than a question of public duty would in our opinion render such an intrusion justifiable. No home should be entered in the name of the law in order to satisfy a mere whim; but no one will seriously question our right, under the provisions of the present statute, to enter any dwelling

wherein we are satisfied that a violation of law exists. We believe, however, that our power should be exercised with circumspection, to the end that the rights of the family in its home may be in no way violated.

### INTEREST MANIFESTED BY REFORM AND OTHER KINDRED ORGANIZATIONS.

In our last annual report the following paragraph appeared:

“The intense interest in the existing conditions manifested by various societies and the apparent determination to aid in the amelioration and improvement aimed at by this Department is most encouraging and inspiring. We hail with delight this growing propensity among a class of people whose influence for good cannot be overestimated. The eagerness with which they seek information, and the willingness evinced to risk all kind of danger to help the unfortunate victims of our present industrial system, is the strongest kind of proof of the popularity of governmental control and regulation of certain productive industries.”

The interest referred to has continued to manifest itself during the past report year. From several sources it has been very encouraging and very helpful, the deepest anxiety having been evinced to aid and assist our Department in every possible manner. Those who, however, have contented themselves with the mere launching of criticism have furnished proof of motives not in entire consonance with their professions. We invite and gladly accept the honest and earnest co-operation of all, to the end that the State shall profit by our service.

### WEEKLY PAYMENT OF WAGES.

It is gratifying to be able to set forth the fact that the provisions of the Weekly Payment Law are observed very fully as a rule and this Department has, except in some few instances, had no difficulty in securing compliances with its requirements.

When the large and varied manufacturing and other interests of our State which are conducted by incorporated companies are taken into consideration, the number of complaints as to violations of the above-mentioned law must be regarded as very small. During the past year 45 complaints relative to violations of the Weekly Payment Law were filed with this Department. Each complaint was carefully investigated. As a result of such investigations, 25 of the complaints were found to be sustained. The Department, in each case, took steps to secure compliance with the law, and our efforts were successful in every instance. Investigation revealed the fact that three of the complaints were groundless and in 17 cases we found that the provisions of the law did not apply, inasmuch as the concerns against which complaints were made were not incorporated. In addition to the foregoing the inspectors of the Department brought to our attention 33 violations of the Weekly Payment Law. In every instance the law was enforced and compliance with its provisions and requirements insisted upon, with the result that arrangements were made for weekly payments, as called for by the statute.

There is no question but that this is one of the most beneficent of all labor laws. Its value cannot be overestimated, and a forceful application of its provisions is an important duty which is most carefully looked after by the officers of this Department.

We have zealously performed this duty, regardless of the individuals interested in, and many times seeking to accomplish, its evasion. In connection with the enforcement of this law the Department has met with a somewhat novel point of law. Several very wealthy corporations doing business in this State have adopted the method of paying their employes by check, and claim is made that their checks are equivalent to cash or currency pay-

ment and that they, to all intents and purposes, are complying with the statute. This Department refused to accept that view of the matter, and therefore submitted the point raised to the attention of Attorney-General Davies, who, in a written opinion, sustained the position taken by the Department. It is the intention of this office to very shortly join issue with these corporations for the purpose of having the matter tested and thereafter properly adjudicated.

### BAKESHOPS.

During the year just closed this Department has devoted special attention to the careful and thorough inspection of bakeshops, confectionery establishments and other places affected by the provision of the Bakery Inspection Law. Our inspections of all such places have been careful, minute and searching. No portion of our work has received more careful attention than the inspection of bakeshops in this State. In every instance where violations of the law were found to exist the law has been impartially, judiciously and firmly enforced.

The strict application and enforcement of the Bakeshop Law requires cool and judicious action on the part of this Department and we have been particularly fortunate in that while bringing about compliance with some 7,783 or more orders issued against bakeshops by the bureau, we have succeeded in avoiding serious friction in any quarter. Many of our orders against bakeshops require a large outlay of money in order to comply therewith and unless the work is voluntarily performed we are required to overcome strong objections and oftentimes powerful influences by taking the delinquents into court, and in that way bringing about results impossible to accomplish otherwise. Careful and vigorous bakeship inspection is a matter of

vital importance to the public generally, for the moral welfare of a community lies largely in the physical well-being of its citizens.

Much discussion has been noticed lately in our public press regarding the alleged unlawful conditions existing in certain East Side bakeshops in the borough of Manhattan, Greater New York. From personal observation and special investigations made by the representatives of this Department it is plain to be seen that to have *all* bakeshops maintained in a clean and sanitary condition at *all* times is well-nigh an utter impossibility. Our inspectors are diligent, honest and painstaking in their work, laboring during the day and many times during the night in order to catch violators of the law. However, notwithstanding all this vigilance on their part, a bakeshop will be in a perfectly lawful condition when an inspector leaves it, after having stood by and waited until everything had been cleaned and placed in compliance with law, and a visit to the same place 48 hours later will reveal unclean conditions which could hardly be thought possible. In all matters of this kind there is no course open to the Department but the prosecution of the offenders. In nearly all such cases legal action has been taken against the violators. The Department does not hesitate to prosecute for these violations of the law, provided there appears to be a reasonable chance of convicting the delinquents. In 14 cases against bakeshop proprietors this Department was successful in having the offenders convicted.

An earnest and determined effort is made to bring all bakeshops in this State up to the standard required by law. We do not experience our greatest difficulty in securing compliance and having bakeshops made clean to conform to the law in the first

instance. In many filthy shops, when the attention of the proprietors is called to unlawful conditions, immediate action is taken to put things in proper shape. But our hard and trying work comes when we endeavor to show and to impress upon these people the absolute necessity of *keeping* their places in a clean and sanitary condition *at all times*, as required by law. Our inspectors make every effort to visit all unlawful bakeshops as many times as is possible during the year, and if their efforts to establish cleanly conditions prove futile recourse is had to legal action, and even the punishment of conviction and fine by the court is not always wholly effective in making this class of people realize what is meant by our orders to "keep bakeshops in a clean and sanitary condition *at all times*."

The vigorous enforcement of the Bakery Inspection Law has brought about a vast improvement, however, in the conditions existing in thousands of bakeshops in this State, and our work has accomplished vastly good results without any undue amount of agitation or friction between this Department and the persons affected by the provisions of the law.

Our duties under the Bakery Inspection Law are arduous and trying and the improvements brought about in bakeries, etc., are due in a large measure to the faithful, intelligent and efficient work of the inspectors of the Department. As a rule, however, we find our efforts are in many instances but indifferently understood or appreciated by employer or employed. The latter does not stop to think of the many obstacles we find it necessary to overcome in our application and enforcement of the statute; the former does not like being coerced into spending money for improvements and keeping shop, utensils, etc., clean for the comfort and benefit of his employes.

During the year the Department received 55 complaints against bakeshops. On careful investigation of such complaints we found but nine of the same were founded on fact and sustained. Full compliance with the law was established in each instance.

Following is given a detailed list of various orders issued by this Department against bakeshops, confectionery establishments, etc., all of which orders have been fully complied with. The data set forth gives but a slight idea of the total amount of the labor performed in connection with the work of bakeshop inspection in this State.

Reduce hours to sixty per week, 238; cease employing minors, 25; fire-escapes, means of exit, etc., 3; provide pipe and hood or ventilate bakerooms, etc., 921; sanitary plumbing and drainage, 133; increase height of bakeroom to at least eight feet, 183; clean premises, remove coal, ashes, etc., 634; repair and limewash or paint walls, ceilings, probers, etc., 2,515; repair, scrape, oil floors, etc., or provide new floors, 1,039; remove beds, bedding, etc., and cease sleeping in bakeroom, etc., 130; keep dogs, chickens, etc., out of bakerooms, 49; provide wash sink, running water, flashing, remove casing, etc., 370; provide water-closets, remove water-closets from bake and store rooms, provide separate water-closets, etc., 37; clean, ventilate, repair, flush water-closets, etc., 65; hand rails, new steps, repair stairs, etc., 348; guard machinery, 30; guard elevators, hoistways, etc., 9; general orders, 25.

The foregoing shows a record of full compliance with 6,754 of the most important orders against bakeshops.

All violations of the Bakery Inspection Law and non-compliances therewith will continue to receive our careful and close attention and to be treated with the strict application of the law heretofore employed.

## INSPECTION OF MINES.

Added to our work of factory and bakeshop inspection is the duty of visiting and inspecting all mines in operation in this State. During the year just closed our mine inspector made careful and thorough inspections of each of the 125 mines in operation.

These mines are operated by 91 different companies and the total number of men employed in the mines is 5,595. There is no minor or child labor in the mines of this State.

The majority of mines in operation in the State of New York are worked in a careful and systematic manner and are as safe as many of our shops and factories. In most mines it is the duty of one man to inspect all ropes, machinery and hoisting apparatus weekly and he is held responsible for their good and safe condition. Boilers are carefully tested at regular intervals and, as a rule, every precaution is taken to render the mine and the mine workings as safe and as secure as possible.

The condition of the mines generally and the material reduction in the number of casualties and fatal accidents occurring therein, plainly indicates a careful observance of and strict compliance with the law, rules and regulations applying thereto and enforced by the Department. At the present day there is a more careful compliance with the ordinary rules of safety than previously prevailed in the working of mines.

In the early stages of mine inspection by this Department, the visits of our mine inspector were viewed somewhat in the light of an intrusion and a nuisance. We are happy to report that this condition is entirely changed and now his inspections, examinations and investigations are welcomed by both mine owners and mine operatives, because they realize that the strict application

and enforcement of the law means greater protection to life and property in every instance.

During the year 1899 the Department found it necessary to condemn eight mines, owing to their dangerous condition. This year but one mine was condemned; and, while the number of fatal accidents is five, as against three during 1899, the increase in the number came about through no negligence or fault of the Department.

During the year just closed no word of complaint was received against the workings of any mine in the State.

The Department issued thirty-eight orders against mining companies, thirty of which have been fully complied with. Nine mines suspended operations during the year. We find that companies fail more frequently to comply with our order to file boiler inspection reports in this office than with any other requirement. It would appear that this order is considered so trivial there is carelessness in strictly complying therewith. Such is not the case; it is very important that reports shall be on file in this office showing the date on which mine boilers are inspected, the condition in which same are found, etc. These reports are very necessary in order that record may be made of the exact condition in which boilers are found when inspected.

The results of careful and conscientious mine inspection by this Department are clearly apparent in the vastly improved conditions existing in most of our mining plants to-day and no effort will be spared by the Department to see to it that the neglect or carelessness of employes is not permitted to bring about conditions which would prove dangerous or unsafe to mine operatives.

There will be found in this report a table giving in detail the work performed in connection with the inspection of mining properties in this State.

### PROSECUTIONS.

The State of New York, through the administration of the affairs of this Department, exercises its police powers in the interest of all wage-earners primarily, and indirectly in the interest of our entire population. The provisions of our laws are clear and explicit and no person affected thereby can consistently object to punishment for violating the same on the ground of ignorance. Prosecution for continued and persistent evasion and violation of the law must be expected. This Department has, during the year just closed, instituted legal proceedings in 223 cases. In 165 cases the guilt of the persons held liable was fully established. The courts failed to accept or be satisfied with the validity of our complaints in thirty-eight cases and as a result the defendants were discharged. The Department withdrew six complaints; in one case the offender pleaded guilty and was held for the grand jury and thirteen cases are pending adjudication as our report year closes.

The total amount of fines imposed was \$2,503.

Out of the 165 convictions secured, fines were imposed in 119 cases, sentence having been suspended in 46 cases. It is not our intention nor our province to criticise the action of the courts in suspending sentences in these cases; but it is our duty to call attention to the fact that out of the whole number of sentences suspended, 34 cases were so disposed of by court justices in the borough of Brooklyn, Greater New York, 10 in the borough of Manhattan and two in the city of Buffalo. A suspended sentence carries no terrors for the offender with it; it is the imposition

of fines that terrifies the violators of the law. It is to be hoped that when our officers present to the courts clear and positive proofs of violation, that not only will the officials be sustained by a conviction of the violator, but that the conviction will be emphasized by the imposition of a substantial fine.

The table of prosecutions given herewith sets forth a statement of the actions which will no doubt prove interesting:

## INTERNATIONAL ASSOCIATION OF FACTORY INSPECTORS.

The meetings of this Association from year to year mark an increasing interest by the public of the several States in the work performed, papers presented, etc., at the conventions held annually. The aim of the Association is to attract attention to and impress upon the minds of the delegates thereto any and all progress made by the various departments of factory inspection represented in the gatherings, to promote a uniform system of inspection throughout the States and Provinces having factory departments and to disseminate a thorough knowledge and understanding of existing laws as practically applied, so that fewer mistakes will be made by inspectors in the performance of their duties. All legislation looking to the improvement of the conditions surrounding factory and mill employes is accorded careful consideration and general discussion and in this way the inspectors attending the conventions have an opportunity to become familiar with the laws on the statute books of other States. The knowledge gained as a result of the discussion of papers presented to the convention is very useful and is the means of giving delegates a clearer and better idea and comprehension of the labors necessary to be performed under the different factory acts in existence; and the broader the knowledge of our own inspectors the more satisfactory is their performance of the duties imposed by the laws of the State of New York.

The value of these annual conventions of the Association is no longer a question. The meetings are productive of good results in most unexpected quarters and these conventions are the only gatherings of the kind whereby factory inspectors are afforded an

opportunity to commingle and exchange views and experiences along the lines of the work in which they are interested.

The constant increase and advance in civilization originates new ideas and brings about amended legislation from year to year and every effort is made to present these matters to the delegates to the Association conventions each year and to maintain the usefulness and instructiveness of the body, to cherish and stimulate the interest and activity of the members in the work of the Association and to make the meetings of benefit and advantage to those favored to the extent of being permitted to attend the conventions.

Many demands from all sections are made for printed copies of the proceedings of the meetings and these demands readily indicate that there is an importance attached to these annual gatherings of the Association which is, in a great degree, appreciated by people of learning and influence. The printed proceedings annually find their way to France, England, Germany, Austria, Scotland and many other foreign principalities.

The progress made in factory legislation since the forming of the Association is very important in many respects, and we hope for the continued prosperity of the Association, for its greater power and influence for good in the future, and that its interests, aims and objects may be instrumental in advancing the work of practical and effective factory inspection in all sections where there is a field for the work.

REPORT  
OF  
Inspection of Mines and Quarries,  
STATE OF NEW YORK,  
1900.

---

---

# REPORT.

---

HON. JOHN WILLIAMS, *Factory Inspector, Albany, N. Y.:*

Sir.—It is with a feeling of satisfaction and appreciation that we are able to state that both the operators and employes appreciate the work done by the Department for the safety, health and convenience of those concerned in the hazardous occupation of mining.

Each year we note an improvement both in the operation of the mines and in the harmony which exists between the operators and the Department. All orders and suggestions given by the Department are cheerfully complied with. Kind and strict discipline is the motto, and all employes realize that this is the only manner in which accidents may be averted. Less carelessness has been noted; conditions which would lead to accident, death and delay have been more stringently avoided. While we are in a period of great prosperity in the mining business—new mines being opened, increased output, labor in great demand, wages increased and a larger number of employes—the number of accidents have not increased. But three fatal accidents have been reported during the year. No accidents have occurred from falling roof rock or side walls, and but one by carelessness among the employes, which heretofore has been a great cause of accidents among the employes in mining. There have been no strikes and very little dissatisfaction. Some trouble was anticipated on account of wages, but has been amicably settled. There was also some dissatisfaction with regard to weekly payment of wages, which matter was settled by the companies complying with the provisions of the Weekly Payment Law.

There was one complaint during the year under the Weekly Payment Law, which was investigated and settled according to the provisions of the labor laws.

It has been my duty to condemn and suspend operations in two shafts, all of which were formerly worked by contract without regard to either system or safety. In all cases new shafts or slopes have been sunk with but one exception.

The code of rules for the guidance of employes in mines, which are tacked up in conspicuous places—shaft-houses, engine-rooms, etc.—bringing them under the everyday notice of the employes, making operators and employes alike responsible for the safety in mine working, are still proving a source of much benefit. No prosecutions for non-compliance with rules or orders have been necessary. In two cases action was about to be brought when the mine owners acknowledged their ignorance of existing conditions and arranged for immediate compliance with the law. The laws relating to the inspection of mines and quarries in New York State as contained in the Labor Law, chapter 415, passed May 13, 1897, have worked very smoothly.

The law as it now stands is, in my opinion, all that is required for the safe operation of the mines and quarries in the State, except that all operators should be required to furnish most of underground workings at the request of the inspector.

We can also note a large decrease in the number of mines worked by contract which heretofore has been a source of much trouble to the Department. Contractors to a large extent were only interested in the number of tons mined without regard to safety. All of mines condemned by myself and all mines condemned this year have formerly been worked by contract. But, happily, I am able to state that but very few of the mines are now so worked. The mines at present worked by contract are under a competent superintendent appointed by the company, and each contract reads that the work done must be performed according to the provisions of the mining laws or the contract become void and of no effect.

The mines throughout the State are in good and safe condition. Boilers, engines and steam appliances have been tested and examined and are in good condition.

Explosives are stored and used according to rules prescribed by the Department; and while the number of mine employes and the amount of mine output has increased, the fatalities have not.

During the past year a number of new companies have commenced operations, also old ones have resumed operations representing an increase of employes.

Besides the condensed information contained in the statistical tables, I think it may be of interest to say that while more mines are in operation and the employes and output have increased, the number of accidents have lessened.

In closing, let me thank you for the kind words of advice you have given me while discharging my duties in the line of protecting the lives and limbs of those employed in the mines in this State.

Very truly yours,

A. R. KING,

*Deputy Mine Inspector.*

## MINES INSPECTED.

NAME OF FIRM.	Location.	Material mined.	Number of employees.	Number of mines.	Number in operation.	Number of boilers.	Aggregate horse-power.	Number of engines.	Aggregate horse-power.	Number of fatal accidents.	Number of serious non-fatal accidents.	Explosives used.	Number of pounds of explosives used.	Number of tons mined.
